Factory Equipment Center

Vendor-independent asset and maintenance management

FOR ALL YOUR MANUFACTURING ASSETS
Factory Equipment Center

VENDOR-INDEPENDENT SOFTWARE FOR INTEGRATED MAINTENANCE MANAGEMENT

With Factory Equipment Center you can manage everything you need for the transparent planning, control, support and documentation of your maintenance activities. In all production areas, for any machine from any manufacturer.

Your service teams have the conditions of your assets under control at all times, can coordinate their maintenance activities with your production schedules, receive multi-media-based instructions and checklists, and save time through automatic documentation.

And all of this is based on state-of-the-art ASMPT software technologies. Factory Equipment Center is easy to install, networked with machines and sensors, and executable anytime and anywhere in the browser of your mobile devices. And it does not tie up your capital because you rent the software as you need it.
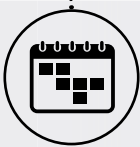

Visualization

Status, configuration, documents, incident and maintenance history, etc. at your fingertips

Planning

Central maintenance calendar for all machines with red-amber-green indicators, task assignments via e-mail

Instructions

Central access to maintenance instructions, checklists, and multimedia-based support

Feeder Management

Trouble and maintenance history of each feeder, central access to verification and maintenance logs, lists of all assets with filter functions. Feeder Management can also be licensed as a standalone module.

Visualization
Information about all machines is just one click away

Planning
All schedules for all assets in a single calendar

Monitoring
Ready for the future Real-time sensor data
for predictive maintenance

Reporting
Fully automated, with quick and detailed documentation

Tracking

Real-time status with
a single click, current
calibration and verification
data, starting point for
predictive maintenance

Monitoring

Real-time sensor data,
histories, and definable
threshold values for alarms

Reporting

Central, automated report-
ing: When a checklist has
been completed, the system
automatically marks the task
as complete and updates the
calendar.

Remote Access

All functions of ASMPT's
Remote Smart Factory
solution are integrated;
updates and settings can
be performed centrally and
efficiently

Instructions
Quick and reliable maintenance:
Access to multimedia-based
instructions anytime and anywhere

RENTING INSTEAD OF BUYING

Factory Equipment Center is offered as software-as-a-service. Fees are based on the number of assets whose maintenance you want to plan and control. You benefit from scalable, easy-to-calculate operating expenses instead of incurring investment risks and having to deal with complex depreciation.

MODULAR DEPLOYMENT

Factory Equipment Center is modular software whose modules you can select as needed. For example, many small factories have only a few machines but lots of feeders that are hard to keep track of. Our solution: License the Feeder Maintenance module of Factory Equipment Center as a standalone module for an unlimited number of feeders.
